

"The brick cladding house" has pursued durability, health and safety.

Please experience it by yourself.

The brick craftsmen from Canada take charge of construction.

We use a 90mm thick brick imported directly from Canada. And it is safe against the earth quake, too because use a lot of earthquake-proof hardware. The brick craftsmen from Canada take charge of construction. The brick exclude the cold in winter and the hot in summer, and the maintenance of the outside wall painting is also unnecessary through the life. The passage at years causes elegance.

Natural heat insulation materials

We use cellulose fiber made from tree and wool as the heat insulator, to control the humidity in the house. Cellulose might not make you any trouble with the vicinity because it has the effect of the soundproofing besides insulation is also very high.

<Characteristic of cellulose>

- *Humidity control *Keep inside the rooms at a comfortable condition
- *Cellulose has installed inside of the wall, it doesn't get mildew and Prevent the condensation that causes a sick building.

Home Made Campaign in 2009

Invite to Canada Toronto where the beautiful town.

We invite all contracted families to the tour that visits the North American house in Canada Toronto. For one person is invited free of charge. The airline ticket, staying, meal, and movement cost in the locale are included in the tour. Even two people or more people can participate. [Actual expenses are needed for participation from the second person]

Our consideration for the safety; use the purity wood for interior.

The interior material uses the purity wood with safety and durability. The floor is 20mm, and the stairs use the pine tree lumber of 40mm thickness. Neither the chemical nor the urethane paintings are used to paint and natural oil made in Germany paints is used.

Painting uses natural oil made in Germany not the urethane painting but the chemical and paints. For the interior material, we don't use the vinyl chloride cross, and adhesive including formaldehyde.

Dry Wall

Dry wall is interior wall that is finished up by the water-based paint in place of the wallpaper or cloth. Advanced base treatment processing gives wall durability and it has peculiar beauty.

PARA paint is Pollution-free water paints made in Canada.

It is a water-based paint that imported directly from environmental advanced country Canada. Imported paint has a reputation for the beauty of the color, the quality of the product, consideration to safety, easiness to use, and the aware of environment and it receives high acclaim also in Europe and America. It has more than 2004 colors of variation, and to repaint it easily by you is a point of a merit.

Re-Home

Reborn the old house is different from mending of house, we can reform your house with fashionable and high durability imported materials.

It is low-priced and the term of works is also reasonable. In addition, a present residence improves designing by a preminent design.

For example . . . Kitchen !

Before

After

HOMEMADE'S house has designed thinking about health and safety.

HOMEMADE proposes the safety, the durability, and the design!

Room redecoration

price 12,000 yen/m²~

PARA paints is

Pollution-free water paints for dry wall.

There is no worry in a sick building syndrome compared with cloth and it is low-priced. The PARA paint can be finished up beautifully in the low price and a short time only by painting it on without peeling off an old cloth though it costs time and money to the substitution of crossing. There is a color variation more than 2400 colors, and everyone can paint it easily, water wipe to maintenance.

The feature of HOMEMADE is variegated lighting equipments and the interior articles.

All the interiors can be coordinated with the beautiful design articles never obtained in another.

Living room with a fireplace

Construction example by HOMEMADE

Flower pattern washing bowl made by Kohler Company
Lighting equipment made by Kichler Company.

The roof material has lasting performance and protection.

price 12,000 yen/m²~

Use the roof material which has guaranteed for 30 years instead of the roof material that needs the re-painting in '10.

Oak Ridge professional 30

It made of durable weathering-grade asphalt and strong Fiberglass mat core for lasting performance and protection, and it has Fire Rating, too. It receives high acclaim on the function sides such as the waterproof property, sound deadening qualities, and weather resistance, etc.

In additional effect, the material has elasticity and it absolves the sound of raindrops, thus it is very quiet and calm.

30-Year Limited Warranty*
Class A UL Fire Rating-the industry's highest rating
70-MPH Wind Resistance Limited Warranty*
